

Handling Data

Key Concepts:

Key Vocabulary

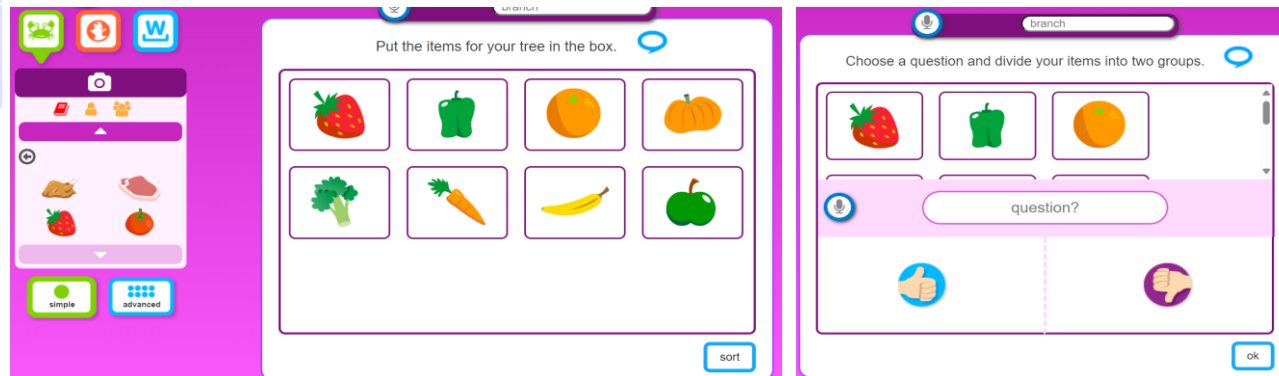

Attribute	A specification that defines the property of an object - a property
Value	The answer to it's attribute name e.g. You may group animals based on where they live. The attribute name would be 'lives' and the attribute value would be 'farm'
Database	A way of storing data so that it can be compared and used.
Equal	The same.

Data can be in the form of:

- Numbers
- Words
- Pictures

When we set up a database, we need to think about the information we are going to collect. We might even need to design the questions we are going to as in order to better help us collect the data we need to answer out questions.

1. Drag items you want to sort then click sort.

2. Write a 'yes' or 'no' question and then sort the items accordingly.

3. Repeat until you have sorted all your items.
