

Living things and their habitats

Key Vocabulary

Suitable/ Suited	Right for something.
Basic needs	Things something or someone can't live without - food, water, shelter.
Food	What people and animals eat to live.
Food chain	The term food chain describes the order in which organisms, or living things, depend on each other for food. 
Shelter	What people and animals use to protect themselves from their surroundings.
Move	Go to a different place.
Feed	To give food to.

Living or not

Living	Dead	Never been Alive
Living things have life processes. They need food, water and air to stay alive. They can sense changes in the environment. They can move, grow and reproduce. 	Many non-living things have never been alive but some of them were once part of a living plant or an animal. 	Non-living things can be things that were once living or part of a living thing, or they can be things that have never been alive. They do not need food, water or air. They cannot reproduce. 

Local habitats

Pond	
Woodland	
Urban	
Gardens	

Micro habitats

Microhabitats are very small habitats where minibeasts may live.

Under logs	
In bushes	
Grass	
Tree
